

In Office Bleaching

Follow up Instructions

After your in-office bleaching, please follow a few guidelines to help you maintain the look of your new smile. Everyone's teeth have a protective layer called the protein pellicle. This layer contains the surface and is removed during bleaching treatments. It takes 24-48 hours for the barriers to fully develop again. During this period, please avoid the items listed below.

You may experience some tooth sensitivity during this period. If you do, take whatever medication you would normally use for a headache.

In-Office Bleaching After Care

DO'S	DON'TS
